CREATING ENVIRONMENTALLY FRIENDLY SOLUTIONS FOR TODAY'S WASTE NEEDS

RECYCLING

Wood/Demo Waste Recycling

Our Volume Reduction Center in Berlin, Connecticut, recycles all clean wood waste we receive from our customers, such as pallets, skids, crates, tree waste, lumber, etc. We own and operate a hammer mill style shredder which reduces large wood into wood chips. The wood chips are then used as a fuel product or wood mulch for landscaping.

Residential Recycling

- Paper • Cardboard • #1 through #7 Plastic
- Food / Beverage Aluminum Cans / Glass

Volume Reduction Centers

No matter how little, or how large an amount of recyclable material you produce, we have a container that will fit your needs. We can collect recyclables from 14 gallon recycling bins up to 100 yard trailers, depending on your needs.

Trailers

The trailers we use are 100 cubic yards. These are used at construction sites for large volumes of construction/demolition debris, as well as at commercial businesses for baled cardboard or paper. In addition we utilize these trailers for transportation of waste at our various transfer stations/volume reduction facilities.

CONTAINERS

Containers from 2 to 50 cubic yards

We offer a full range of refuse, recycling and construction/demolition waste services. We stock containers that range from 2 thru 50 cubic yards. This enables us to service homeowners, construction sites and businesses of all sizes.

Front Load Containers

Front load containers range from 2 thru 10 cubic yards. These are most commonly used at commercial businesses for refuse and recycling.

Roll-Off Containers

Roll-off containers range from 12 thru 50 cubic yards. These are most commonly used on construction sites for construction and demolition debris removal. These can also be used at residential homes for cleanouts, remodeling debris and roofing debris, as well as at commercial businesses for general debris.

The 40 and 50 cubic yard containers are usually found at transfer stations for the hauling of materials to final disposal facilities.

For more information on your Commercial, Residential, Construction & Recycling needs, please contact us today: **860.747.1335**

COMPACTION

For large volumes of refuse, or recycling materials, we offer a full range of compaction systems. These units range in size from 6 cubic yards to 40 cubic yards.

We can provide the equipment, installation, maintenance and service. In the event of an equipment failure, we offer 24 hour on call service for repairs.

VIP Compactors

VIP compactors are a vertical compactor unit with a front load container placed below the unit. These units are compact and are ideal for businesses such as fast food restaurants, or where there is limited space. The sizes of these units are 3 and 8 cubic yards.

Self-Contained Compactors

Self-contained compactors are an all in one unit. The compactor and the container are built together as one unit. When the compactor needs to be emptied, the entire unit is removed and returned. These units are sealed to provide a leak proof compactor. These are ideal for customers who have wet trash, such as restaurants and nursing homes. Self-contained compactors range in size from 12 cubic yards to 35 cubic yards. These units are emptied with a roll-off truck.

Break-Away Compactors

Break-away compactors are two separate pieces. The compactor unit is separate from the container. The unit is installed and there is a container that attaches to the unit. When the container is full, we detach the container and empty and return the container. The containers range from 20 to 50 cubic yards. The break-away compactor is better suited for dry trash, or materials such as cardboard or paper. These are also emptied with a roll-off truck.
